

# RRSP's Built Green

## Smart Investing Blueprint

Is Your Current RRSP Portfolio Underperforming? Investing in Your Future with Green Technology at Work is a Smart Plan.

### Blueprint for Growth

Your money is working to build a substantial return in a shorter period of time. Not only is your money growing faster, it is invested in a company with a competitive advantage and environmentally friendly technology. Trinity's patent pending construction blueprint delivers smart solutions to builders, developers and consumers while providing an exclusive opportunity for investors to grow their retirement nest eggs.

### Held in Trust at WPTC

RRSP investments are held in trust at **Western Pacific Trust Company in Vancouver, B.C.**

Issued as Class B shares in Trinity Post and Panel Inc. you will be earning a cumulative **9% dividend** rate. Your RRSP investment will have preference for payment of dividends over all other shares in the company with a minimum term of 63 months.

We encourage you to carefully consider the benefits of this program as these opportunities are a rare find in today's economy.

### Investment Knowledge That Earns You More!

If you follow what most people do and leave your cash in a TFSA you would currently earn between 1% and 2% interest from your bank on a tax free basis. Banks invest your money for huge profits and pay you minimally. Compare this to the 9% dividend here and the choice becomes clear. Once you have this knowledge, your savings are at work for you, creating jobs, not a profit for your bank. A \$10,000 example over 5 years will earn you approximately \$ 3500, (35%) more than in a bank. Certain investors may be eligible for even bigger returns. There is no deadline.

### Smart Choices that grow

There are a number of ways to get started with a Trinity investment.

- \* **Withdraw (TFSA's) from your Bank,** Tax Free Savings and **earn 9%** every year. (Instead of the bank at 1-2%)
- \* **Transfer an existing RRSP** (not affected by any deadlines)
- \* **Automate monthly contributions**
- \* **Invest new cash**

### High R-Value Investment

The Trinity system integrates channelled Timbers (Posts and Beams) with "SIP" Wall and Roof Panels (Structural Insulated Panels). This IPP® Integrated Post and Panel® construction system forms an air tight, energy efficient exo-skeleton that assembles in days rather than weeks. High R-Value ratings exceed Ener-Guide ratings and building codes resulting in extreme monthly energy savings.

The IPP® trade name is copyrighted and the building concept has international patent protection.

Green and smart, IPP® costs less to build than traditional Post and Beam structures or typical mid level stick frame construction.
